

MVP v2

Lowkey claude

MVP Services

1. Paid Diagnostic (Week 1)

- Pull last 30-60 days of call logs, quotes, and messages from their existing system (Jobber, Housecall Pro, QuickBooks, Google Voice, whatever they use).
 - *What if they exclusively run it through whatsapp and a taped together system?*
- Identify missed calls, unreturned voicemails, and quotes that went stale without follow-up.
- Calculate the dollar value of recoverable revenue based on their average ticket and close rate.
- Deliver a 20-minute Loom (?? *What is loom?*) walkthrough with the specific number and the three biggest leaks.
- Fixed price, paid up front, credited toward setup if they continue.

2. Lead Recovery Setup (Weeks 2-4)

- Connect to their existing call log, CRM, and quote system via API or shared inbox.
- Install SMS and email follow-up workflows tuned to their services, hours, and service area
 - Missed-call texts within 60 seconds, with urgency detection (emergency vs. quote request vs. tire-kicker)
 - Stale-quote follow-ups at the intervals that actually convert (typically 24h, 72h, 7d, 14d)
 - Message templates written in the owner's voice, not generic AI copy.
- Define the rules for what gets a follow-up, what gets escalated to the owner, and what gets dropped.
- Set up the weekly report: jobs recovered, dollars recovered, what changed, what to try next week.
- Owner sign-off on every workflow before it goes live.

3. Monthly Operating Retainer (Ongoing)

- Run and maintain the follow-up workflows
- Tune messages and timing based on what's actually converting
- Add seasonal playbooks (furnace season, AC season, frozen pipes, spring HVAC tune-ups)
- Handle the integration tax: webhook breaks, phone number changes, new service categories, software

updates on their end

- Weekly dollarized report delivered every Monday morning.
- Monthly call with the owner to review the number and decide next moves.

Post MVP Services

- AI receptionist for overflow and after-hours calls, with human handoff rules defined together
 - Quote-builder follow-up sequences tied to specific job types
 - Review-request automation after completed jobs
 - Reactivation campaigns for customers who haven't booked in 12+ months.^{ooo}
-

MVP v1:

AI receptionist capabilities:

- Answering calls and managing inquiries real time.
- Making appropriate calendar appointments
- Providing monthly summaries on calls managed and booked appointments.

AI Front Desk + Lead Recovery System

1. AI context

- Company Information
 - Company services offered
 - Defined service areas
 - Defined business hours
 - Defined out-of-scope and emergency rules
 - Define human handoff criteria
- Identify common customer inquiries
 - Map out a decision tree
- Define booking criteria

1. Set up AI Receptionist Operations

- Answer calls
 - Handle common inquiries
 - Book appointments
 - Collect customer information

- Name
- Phone number
- Address
- Service needed
- Urgency
- Preferred appointment time
- Offer available time slots
- Book appointments in company calendar
- Route calls to owner/team at user's request or ambiguous requests
- Log customer information in database
- Log information in database
 - Call transcripts
 - Customer information
 - Call outcomes
- Sort call outcomes into potential future leads
- Restrict AI to the scope of the company (?)

Post MVP Services

1. AI Lead Follow-Up & Status Tracking

- Proactively call potential leads identified from previous calls.
- Send follow-up SMS/email to follow up worthy callers
 - *Should the follow-up system run via sms/email or calls? Customers may not appreciate AI follow-ups.*
- Add lead information into database
- Track lead status
 - Status Options
 - New inquiry
 - Contacted
 - Appointment booked
 - Needs owner follow-up
 - Not a fit / Do not contact again

1. AI Quote Follow-Up (? / Unsure) & Status Tracking

- Track quotes and estimates
 - *What software, API, database is used for this*
- Add quote outcomes to database

- Quote database options

- ☐ Accepted
- ☐ Still deciding
- ☐ Lost
